Recent Triumphs of the Stevens-Duryea Automobile

"The second race was a cinch for the STEVENS-DURYEA, which won by three-quarters of a mile." So says the "Los Angeles (Cal.) Herald" in its issue of November 22, 1903, in commenting on the automobile races at Agricultural Park, Los Angeles, Cal. This news item was supplemented by a laconic telegram received from Norman W. Church by the J. Stevens Arms & Tool Company, Chicopee Falls, Mass., which stated—"Won five mile race in seven forty-three, ten thousand people."

Following this first memorable triumph of the week, came the intelligence that on November 25, a STEVENS-DURYEA machine, driven by Mr. Owesney, led the way for sixteen cars of well-known makes in the road race from Washington, D. C. to Frederick, Md. This was a 51 mile run over hilly roads, and the time made was two hours and six minutes.

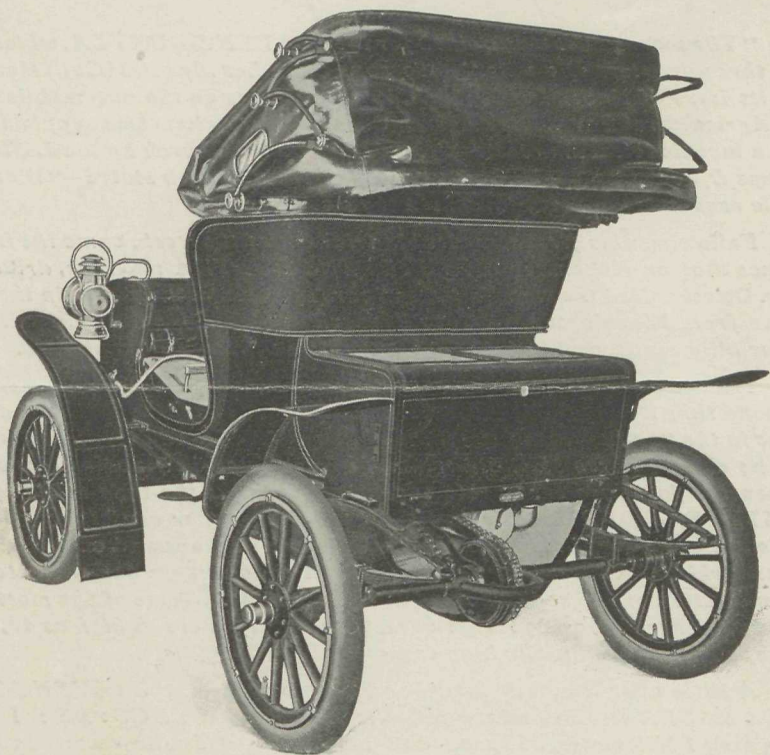

The next day, November 26, the STEVENS-DURYEA RACER for the second time won the Eagle Rock, N. J. hill climbing contest. This machine was in the van in each of the three events entered, and defeated every car in its class. Three splendid triumphs in one day is a noble record, and when the facts are taken into consideration, that the time made by the "STEVENS-DURYEA" eclipsed that of every other contesting automobile but one (being beaten out by one-quarter of a second only by W. K. Vanderbilt's 30 horsepower Mors racer) it conclusively demonstrates the combination of virtues embodied in this machine. Some of the most celebrated American and foreign cars, with horsepowers as high as 40, were competing in this hill-climbing contest.

A little over a month later—on December 31—the STEVENS-DURYEA RACER established the following WORLD'S RECORDS: 1 Mile, 57½ sec.; 1 Kilometer, 35½ sec.; and also made a 5-mile record in 4.57½ at the Ormond-Daytona, Florida, Course. This is, to say the least,

A Tribute to the Stevens-Duryea Gasoline Automobile

This is What the Other Contestants Saw of the Stevens-Duryea

Its motor is 7 horsepower; possesses two cylinders of the opposed type; has three speeds and reverses, all operated by the same lever, and runs without noise or vibration; seats two or four passengers; easily operated by a lady.
